Education

University of Washington

M.S. in Computer Science and Engineering, **GPA: 3.87**

Seattle, WA

Expected March 2027

Experience

Makeability Lab

Project Lead

Seattle, WA

March 2025–Present

- Build PreviewAR, a spatially aware AR system that converts free-form sketches into scale-accurate 3D previews through retrieval, image preprocessing, 3D generation, and Unity rescaling.
- Curate a 1,000-example synthetic accessibility dataset; fine-tune models with QLoRA and evaluate alignment with accessibility criteria.
- Develop a real-time AR translation system that preserves typography, color, texture, and background for visually integrated AI-generated overlays.

Amazon

Software Development Engineer Intern

Seattle, WA

June 2024–September 2024

- Designed an LLM-assisted application enabling Amazon developers to generate, review, and refine Amazon.com design variations through human feedback.
- Prototyped full-stack features for evaluating thousands of variants, contributing to click-through-rate improvements across Amazon.com experiences.

Capital One

Software Engineer Intern

San Francisco, CA

June 2023–August 2023

- Built and deployed a Python application serving Capital One customers, reducing processing time by 73% through Docker-based containerization and Kubernetes deployment.
- Designed FastAPI backend services integrating with internal Capital One APIs and supporting millions of annual requests.

Projects & Activities

Paul G. Allen School of Computer Science

Research Intern, NSF REU

Seattle, WA

September 2023–December 2023

- Built a real-time AR crosswalk aid for blind and low-vision users combining object detection, vision-language reasoning, and Unity overlays; evaluated it with 20+ participants.
- Developed a real-time AR system using fine-tuned vision models to detect harmful billboards and replace them with contextual visual overlays for 20 users.

Dub Group

Software Lead

Seattle, WA

September 2024–Present

- Curate 100+ LLM-generated websites annotated with accessibility errors to benchmark automated accessibility evaluation systems.
- Build a real-time personalization plugin that adapts interfaces to accessibility needs across 50+ applications, used by 250+ users.

University of Washington

Teaching Assistant

Seattle, WA

September 2022–Present

- Teach 20+ sections and support 500+ students through office hours and lectures on SQL, Java, Android Studio, and XML.
- Develop Android and database projects, coding demos, and instructional materials used by 300+ students.

Skills

Languages Python, Java, C++, C#, JavaScript/TypeScript, SQL, L^AT_EX

Technologies PyTorch, LLMs, VLMs, QLoRA, FastAPI, Docker, Unity, ROS, React, Git
