Education

University of Washington

Seattle, WA

M.S. in Computer Science and Engineering, **GPA: 3.87**

Expected: December 2027

Selected Coursework:

Machine Learning, Deep Learning, Computer Vision, Artificial Intelligence, Robotics, AR/VR, Databases

Experience

Makeability Lab

Seattle, WA

Project Lead

March 2025–Present

- Developed a real-time AR translation system with font/background awareness by curating a font dataset and training an SVM on 1,500+ English fonts.
- Fine-tuning and benchmarking models using QLoRA on a synthetically generated SFT dataset of 1000 accessibility examples to align state-of-the-art models with accessibility criteria
- Built a spatially aware AR system enabling users to preview online products in 3D using a lasso tool and a pipeline combining segmentation, masking, prompt-based inpainting, and 3D generation

Amazon

Seattle, WA

Software Development Engineer Intern

June 2024–September 2024

- Designed a test application enabling Amazon developers to leverage LLMs through a human feedback loop to explore design variations for Amazon.com
- Prototyped features for a full-stack application allowing developers to test thousands of designs for Amazon.com, contributing to click-rate improvements across thousands of users

Capital One

San Francisco, CA

Software Engineer Intern

June 2023–August 2023

- Built a large-scale Python application for 5M+ users, reducing processing time by 73%, and containerized and deployed it on Capital One infrastructure using Docker and Kubernetes
- Designed and deployed Python backend services and APIs handling millions of requests annually

Projects & Activities

Dub Group

Seattle, WA

Software Lead

September 2024–Present

- Curated a dataset of 100+ LLM-generated websites with annotated accessibility errors for benchmarking and evaluation
- Building a real-time personalization plugin enabling adaptive behavior across 50+ applications, used by 250+ users

Paul G Allen School of Computer Science

September 2023–Decemeber 2023

- Developed a real-time AR system with fine-tuned models to filter harmful billboards for 20 users
- Built a real-time AR crosswalk aid for Blind and low-vision individuals using Unity, integrating VLMs, LLMs, and an 80+ class detection model, evaluated in a 20+ participant study

University of Washington

September 2022–Present

- Prepared and presented 20+ class sections with interactive coding demos, presentations, and exercises
- Developed 20+ course projects and materials for 300+ students in Android development and databases using SQL and Java
- Guided 500+ students through SQL, Java, Android Studio, and XML across 70+ office hours, 20+ sections, and 2 lectures

Skills

Languages Python, Java, C++, C#, JavaScript/TypeScript, SQL, L^AT_EX

Technologies PyTorch, VLMs, LLMs, Docker, Kubernetes, Flask, Git, ROS, Unity, React
